

MULTI-ASSET AGENCY SOLUTIONS

Trade with clarity. Execute with control.

RBC Capital Markets' multi-asset trading platform is the only solution that keeps intelligence connected from decision to action.

[Request demo](#)

A new standard for multi-asset trading.

Trading desks are evolving, and the gap between real-time intelligence and multi-asset execution is closing fast.

Many platforms help you analyze the trade. MAAS, RBC's Multi-Asset Agency Solutions platform, goes further: bringing trading intelligence, execution technology and portfolio tools into one unified experience. Across all major asset classes and order events, MAAS helps you analyze opportunities, execute strategies and manage risk with greater visibility and control.

Because in complex markets, the traders who win aren't just faster – they're better informed, better connected, and better positioned to execute.

Two platforms, one unified ecosystem

Better insight for stronger execution

MATA: Intelligence

Transform data into trading intelligence

Turn cross-asset insight into actionable, portfolio-wide intelligence, helping you make execution decisions before anyone else.

- Quantify expected execution costs before commitment
- Compare strategies side-by-side to evaluate potential outcomes
- Explore interactive outlier views to focus on higher risk or higher-to-trade orders
- Monitor market conditions and portfolio exposures
- Model downside across asset classes

MAAS: Execution

Drive stronger performance outcomes

Turn trading insight into disciplined execution, with advanced technology designed to adapt to market conditions change.

- Atomic adaptive algorithms built for live market conditions
- Select Aligned strategies tailored to execution objectives
- Focus order intelligently to take maximum market impact
- Support consistency across asset classes through shared monitoring, execution workflow and pattern rule sets
- Benchmark performance against portfolio expectations

MATA: capabilities

Sharper insight. Smarter trades.

Explore MATA capabilities across core asset classes, with specialized tools and intelligence for event-driven trading decisions

Equities

Global Equities, ETFs & ADRs

Efficient flow to markets before you move, with expected cost estimates, strategy comparisons, close analytics and interactive outlier views

FX

FX & EM Currency Pairs

Access expected execution costs across currency pairs, model scenarios before the trade and monitor live order performance, arrival cost and market conditions during execution

Futures

Index, Commodity & Rate Futures

Track risk dynamics, historical volatility and open interest participation, then use execution cost analytics and strategy optimization to evaluate opportunities across futures

Index events

120+ Global Indices

Anticipate index changes before imbalances with analytics shared by RBC Capital Markets' Program Trading team, including expected additions, deletions, mergers and downweights, corporate action events, spread analysis and synthetic share impact estimates

Innovation for the next execution era

Technology, scale and multi-asset expertise – engineered to help you execute with confidence.

/01 Model with depth Proprietary market impact models, predictive analytics and execution algorithms built by RBC Capital Markets' program trading team.	/02 Connect with ease Intuitive web interfaces and robust APIs that connect into existing trading infrastructure and institutional workflows. The power of the platform – without rebuilding your stack or retaining your team.	/03 Optimize with experts Dedicated coverage, ongoing strategy optimization and collaborative development designed to evolve with your needs and market conditions.
